

About this collection

AI is becoming a bigger part of the education system, more specifically college education, but it can be difficult to know which AI tools and information are actually useful and benefit you. This collection was created to help college students understand practical ways they can use AI for school, productivity, safety, and career preparation while also understanding the risks that come with it. Instead of trying to cover every possible use of AI, this collection focuses specifically on how students can use AI as a tool without allowing it to replace their own thinking and decision-making.

I split this collection into three different categories: School & Learning, Career Preparation, and AI Safety. The School & Learning category focuses more on resources about studying, research, writing, and responsible use of AI in education. The Career Preparation category includes resources about resumes, interviews, careers, and the changing workplace. The AI Safety category covers topics such as privacy, misinformation, deepfakes, and scams.

The collection includes different types of sources, including articles, research, organizations, videos, podcasts, TED Talks, and other resources. Each source includes an annotation explaining what it covers, why it is useful, who would benefit from it, and any limitations it may have. The goal is to give students a collection they actually can use instead of simply giving them a list.

Source 1: UNESCO – “Guidance for Generative AI in Education and Research”

URL:

<https://www.unesco.org/en/articles/guidance-generative-ai-education-and-research>

Category Placement: School & Learning

Tags: #Education #Research #Ethics #ResponsibleAI

Annotation

What it covers: UNESCO talks about how generative AI can be used in educational settings and research. But it also talks about how they address ethics, privacy, and human-centered use.

Why it is valuable: It's important because it shows that AI isn't a shortcut, but it shows how people can use it responsibly.

Who would benefit: This can benefit students, teachers, and anyone who uses AI for learning and

research purposes.

Limitations: The information is pretty broad and focuses more on education policy, and doesn't give instructions for all of the AI tools.

Source 2: Stanford Graduate School of Education – AI in the Classroom: Lessons from the Field

URL:

<https://ed-prod.stanford.edu/news-media/podcast>

Type: Video/Podcast

Category Placement: School & Learning

Tags: #Education #AlinSchool #Learning #Students

Annotation

What it covers: This Stanford Graduate School of Education podcast episode looks over how Artificial Intelligence is being used in education and what researchers and educators are learning from those experiences. It also focuses on AI in the classroom and connects AI use to research purposes and teaching practices.

Why it is valuable: This source is useful because it gives my collection a audio/video bases perspective instead of relying on written articles for those who don't really like to read. It also comes from a university known for education research, which makes this source credible when understanding how AI is changing classrooms.

Who would benefit: College students, teachers, and anyone who is interested in how AI is affecting education and could benefit from this source.

Limitations: This source focuses more on education research rather than on specific AI tools students can use every day.

Source 3: Teaching@Tufts – How is AI Helping (or Hindering) Learning?

URL:

<https://sites.tufts.edu/teaching/podcast/s1-e4-how-is-ai-helping-or-hindering-learning/>

Type: Podcast

Category Placement: School & Learning

Tags: #Learning #Studying #ResponsibleAI

What it covers: This episode from Tufts University goes over whether AI actually helps students learn or simply makes completing assignments easier. The episode provides practical ideas for using AI while protecting students' ability to think and learn independently.

Why it is valuable: I think this is especially useful for my collection because my project is not meant to argue that AI is always good. It shows that AI can be helpful while still creating problems if students rely on it too much.

Who would find it useful: College students would benefit from this because it encourages them to think about whether they are actually learning when they use AI.

Limitations: The episode is more focused on learning and educational practices rather than talking more about specific AI tools.

Source 4: American Psychological Association – How Teaching and Learning Will Change in the Age of AI

URL:

<https://www.youtube.com/watch?v=iLQU6SG917M>

Type: Video

Category Placement: School & Learning

Tags: #Learning #education #Alethics #Students

What it covers: On this video, C. Edward Watson and Beth Schwartz talk about how AI is shaking up classrooms. They discuss how it can help or hurt students, why teachers might need to rethink assignments, and why students should know how to use AI wisely.

Why it is valuable: This source is useful because it connects AI to a more psychological level and learning rather than only focusing on technology.

Who would find it useful: Students and educators interested in how AI affects learning would benefit from it. But also for people who want to understand the human side of AI in education.

Limitations: This video focuses mainly on the education and learning aspect rather than providing information about career preparation and productivity tools.

Source 5: The process of generative AI writing: a practical guide for undergraduates across disciplines /

Nathan Jung.

URL:

<https://utswm.bywatersolutions.com/cgi-bin/koha/opac-detail.pl?biblionumber=2402538>

Type: Book

Category Placement: School & Learning

Tags: #Writing #Students #GenerativeAI #ResponsibleAI

What it covers: This book explains how college students can use generative AI throughout the writing process, including brainstorming, drafting, and revising. It also focuses on using AI as a writing helper rather than it creating the entire assignment.

Why it is valuable: This is useful because writing is something most college students have to do. It shows how AI can help with writing while still keeping the student involved in the process.

Who would find it useful: College students who use AI for essays, projects, brainstorming, or editing would benefit from this book.

Limitations: The book focuses mostly on writing, so it does not cover other areas such as AI for careers, productivity, or scams.

Source 6: FSCJ – AI Goes to College

URL:

<https://podcasts.apple.com/us/podcast/ai-goes-to-college/id1748246516>

Type: Podcast

Category Placement: School & Learning / Career Preparation

Tags: #college #education #careers #productivity

What it covers: It focuses on AI in higher education like College/University. There are many different episodes that include discussions with students, faculty, and professionals about AI in learning, productivity, academic integrity, and future careers. For example, one of the episodes talks about AI tools such as ChatGPT, Perplexity, NotebookLM, and other productivity tools.

Why it is valuable: This source is useful because it covers several areas of my project at once. It gives real perspectives from students and educators while also discussing practical AI tools and how AI could affect future jobs.

Who would find it useful: College students would find this particularly useful because the podcast focuses directly on those who are in College/University and the experiences of people involved in it.

Limitations: Because the podcast contains many different episodes and topics, some of individual

episodes may not all be relevant to my project. I would need to select a specific episode instead of trying to use the entire podcast as one source.

Source 7: Brown University – Using AI in Your Job Search

URL:

<https://career-center.brown.edu/planning-resources/job-search-resources/using-ai-your-job-search>

Type: University Resource

Category Placement: Career Preparation

Tags: #Resume #Aicareer #Jobsearch #Authenticity

What it covers: Brown University's career center strongly encourages us to start with your own resume and experiences, then use AI for feedback and possible improvements. But it's also important to treat AI-generated writing as a starting point and not a finished product. But also make sure the final version accurately reflects your real experiences.

Why it is valuable: This source supports one of the main ideas behind my collection, which is that AI should be a tool that helps students or anyone improve their work rather than it replacing their own personal experience.

Who would find it useful: Students creating resumes, applying for internships.

Limitations: The advice focuses heavily on resumes and job applications. It doesn't provide detailed guidance for all of the career fields.

Source 8: AI Literacy, Ethics & Future Careers Student Course Book – Sherridean Abddeen

URL:

https://www.google.com/books/edition/AI_Literacy_Ethics_Future_Careers_Studen/JM30EQAAQBAJ?hl=en&gbpv=0

Type: Book

Category Placement: Career Preparation

Tags: #CareerPreparation #Alethics #AILiteracy #FutureofWork #Students

What it covers: This book focuses on helping students understand AI, use it responsibly, think critically with it, and prepare for careers in a world where AI is becoming more common. It also discusses how students can use AI as a tool without becoming dependent on it.

Why it is valuable: This fits my project because it connects AI education with future careers. Students will be exposed to AI in school and workplaces, so learning how to work with it responsibly can be useful.

Who would find it useful: College students and other students preparing for future careers could benefit from this book.

Limitations: The book is new, so there is less long-term research available about its approach. Also, AI is changing quickly, so some specific information about AI tools could become outdated.

Source 9: TED-Ed – Let's Use Video to Reinvent Education by Salman Khan

URL

<https://www.youtube.com/watch?v=DC58z4N0IWw&t=1s>

Type: TED Talk / Video

Category: School & Learning

Tags: #Learning #Education #Technology #Students

What it covers: Salman Khan explains how technology and educational videos can change the way students learn. He talks about students learning at their own pace and using technology to support education.

Why it is valuable: This video gives a good example of how technology can make learning more flexible. It connects with my project because AI is another technology that students can use as a learning tool.

Who would find it useful: Students and teachers who are interested in using technology to improve learning.

Limitations: The video is not specifically about AI, so it should be used more as a background source about technology and education.

Source 10: International Labour Organization – “Generative AI and Jobs: A 2025 Update”

URL:

https://www.ilo.org/sites/default/files/2025-05/Research%20brief_FINAL_15May2025_21.05.25_1.pdf

Type: Research Report

Category Placement: Career Preparation

Tags: #AlandJobs #Careers #Employment #CareerPlanning

Annotation

What it covers: ILO explains how generative AI may affect different occupations by looking at the tasks in hand and levels of exposure, and gives us a chart showing it.

Why it is valuable: It gives a more realistic view of AI at work instead of assuming AI will simply take over and get rid of all of the jobs.

Who would benefit: Students, workers, and people thinking about their future careers.

Limitations: It is more of a global occupational analysis, so other workplaces can look at or experience AI very differently.

Source 11: University of Tennessee – AI in the Job Search

URL:

<https://studentsuccess.utk.edu/career/plan-and-apply/ai-in-the-job-search/>

Type: University Resource

Category Placement: Career Preparation

Tags: #AlandJobs #Careers #Interviews #Privacy #Resume

Annotation

What it covers: UofT explains how students can use AI to search for careers, make resumes, improve cover letters, and practice for interviews. It also covers what information students should not put into AI and gives examples of prompts they can use.

Why it is valuable: This source is important because it gives students real examples of how AI can help with finding a job.

Who would benefit: Students looking for jobs or even internships. But it can also help students who are not sure where to start with their career search.

Limitations: The source mostly focuses on finding a job and does not talk much about using AI in the workplace. Students also need to make sure their resumes and applications are truthful and represent their own experience.

Source 12: Federal Trade Commission – “AI Impersonation Protections”

URL:

<https://www.ftc.gov/news-events/news/press-releases/2024/02/ftc-proposes-new-protections-combat-ai-impersonation-individuals>

Type: Government Resource / Press Release

Category Placement: AI Safety

Tags: #Scams #Deepfakes #VoiceCloning #Safety #Privacy

Annotation

What it covers: The Federal Trade Commission discusses how AI enabled impersonation fraud, including voice cloning and deepfakes, and talks about efforts to strengthen their protection to combat scams like that.

Why it is valuable: It shows us not only what AI can do for people, but it also shows that the same AI software can be misused.

Who would benefit: Every internet user who wants to recognize scams and prevent them.

Limitations: It focuses more on consumer protection instead of teaching the consumer how to use some of the AI tools.

Source 13: Pew Research Center – “Artificial Intelligence in Daily Life: Views and Experiences”

URL:

<https://www.pewresearch.org/2025/04/03/artificial-intelligence-in-daily-life-views-and-experiences/>

Type: Research Article / Survey Report

Category Placement: AI Safety/Awareness

Tags: #AlinDailyLife #AIUse #AITrends #PublicOpinion #AIResearch

Annotation

What it covers: The Pew Research Center Article looks at how people interact with their everyday lives, including chatbots and AI that shows up in areas such as social media, healthcare, and financial

services.

Why it is valuable: It is important because it gives my project real survey data instead of opinions and helps establish the common AI we already have.

Who would benefit: This can benefit people of all ages, especially students, teachers, healthcare professionals and anyone who uses AI for learning and research purposes.

Limitations: It focuses more on adults and expert opinions, so what every you find aren't going to be treated as something that is universal.

Source 14: World Health Organization – “Artificial Intelligence for Health”

URL:

<https://www.who.int/publications/m/item/artificial-intelligence-for-health>

Type: Article

Category Placement: AI Safety/Health

Tags: #AlandHealth #HealthAI #Safety

Annotation

What it covers: The World Health Organization talks about the potential of AI to support health systems while talking about its safety and ethical use. It tells us that AI can help address challenges like a workforce employment shortage and things of that nature.

Why it is valuable: Health is a big thing in our society where people can rely on AI too much, so this source reminds us that humans experts are still there and need oversight.

Who would benefit: Anyone who is interested in AI and health information.

Limitations: It focuses more on health systems and policies, not things like medical diagnosis or treatment.

Source 15: Monash University – Responsible and Ethical Use of AI

URL:

<https://www.monash.edu/student-academic-success/ai-hub/responsible-and-ethical-use-of-ai>

Type: University Guide / Video

Category Placement: AI Safety

Tags: #AISafety #ResponsibleAI #Privacy #AcademicIntegrity

Annotation

What it covers: Monash University explains how students can use AI responsibly in their work. It talks about checking how accurate AI is, protecting personal information, and following the academic integrity rules.

Why it is valuable: It focuses directly on students instead of just talking about AI in general.

Who would benefit: College students who use CHATGPT or other AI tools for School.

Limitations: It mainly focuses on academic use, so it doesn't cover every AI safety issue, such as scams or deepfakes.
